

ABSTRACT OF THE DISCLOSURE

- 5 A process for stabilizing organosilicon compounds bearing unsaturated groups during their preparation, distillation, and/or storage, the organosilicon compounds bearing unsaturated groups having been obtained by reacting a haloalkylsilane with a salt of an unsaturated organic acid, by adding one or more compounds of the formula I

(I)

wherein R¹ and R² are identical or different linear or branched C₁₋₂₀ alkyl, and the radicals R³ are identical or different and are hydrogen or linear or branched alkyl radicals having 1-20 carbon atoms.
